

## Gentec Float Switches

Float Switches contain a reed switch with an actuator magnet in the float. Material is glass filled polypropylene or nylon 6.6 moulding. Contacts close when the magnet assembly reaches the centre line of the main body. Normally open or normally closed operations depend upon orientation, i.e if the magnet floats away or towards switch. Detects rise or fall of liquid, as well as liquid flow or predetermined volume. Design allows fitting to be achieved both as an internal operation or externally if necessary.

### Mechanical Specifications

- ▶ Mounting position: Horizontal models +/- 30 degrees from horizontal
- ▶ Minimum operating angle: Horizontal models 5 degrees from mounting angle
- ▶ Maximum release angle: Horizontal models 40 degrees from mounting angle
- ▶ Shock\*: 50g for 11 milliseconds duration
- ▶ Vibration\*: 35g up to 500 Hz
- ▶ Nominal cable length: 0.5 metre

Max. Current  
Example:  
For 15 Watts  
230 Volts = 65mA  
\* Reed switch only

The switching performance can be drastically affected if switch ratings are exceeded. Inductive, capacitive and tungsten filament lamp loads derate by 50%. All switch ratings are at DC resistive loads.
